

De Klerck Engineering – BIM Manager

About the role

Are you looking for a leading role with a passion for digital innovation in the construction sector? Do you want to play a key role in transforming our projects into a future-proof, efficient working environment? Then we are looking for you!

As a **BIM Manager**, you are the driving force behind the development and implementation of our BIM strategy, both at the company level and within individual projects. You are responsible for:

- Developing a clear and well-thought-out BIM strategy and ensuring its successful implementation.
- Developing BIM management plans and ensuring compliance with procedures, standards, and regulations.
- Coordinating and managing BIM models for various projects, facilitating smooth collaboration between all involved parties.
- Establishing and continuously optimizing BIM standards and workflows to ensure efficiency and quality.
- Guiding and coaching colleagues in the use of BIM software, ensuring the entire team is engaged in the digital transformation.
- Acting as the main point of contact for all internal questions and support regarding BIM.
- Managing the BIM libraries and creating new content.
- Drawing, checking, and validating BIM models to ensure quality and accuracy.
- Actively contributing to further building and standardizing the BIM process within the organization.
- Monitoring the quality of models and drawings, including performing clash detections and checks.
- Innovating with advanced techniques such as parametric modeling, automation, and data integration.

What do you bring?

- You have a master's degree in civil engineering or an equivalent qualification.
- Preferably, you have some experience as a BIM manager and are familiar with the challenges of this role.
- You have thorough knowledge of several of the following programs: Revit, Autocad MEP, and Autodesk Construction Cloud. Additional knowledge of Linear, Designbuilder, Rhino, Allplan, Tekla, and Strakon is a plus.
- You are willing to further deepen your knowledge in programs you (yet) do not sufficiently know.
- You are familiar with BIM protocols and the development and interpretation of BIM execution plans.
- You communicate clearly and structured with colleagues, project partners, and other stakeholders.
- You work accurately, have an eye for detail, and think solution-oriented.
- You remain calm under pressure and are always willing to help others.
- You show initiative and do not shy away from any challenge.
- Professional knowledge of the Dutch language

What do we offer you?

- A warm welcome in our family business, where you will quickly feel at home in a driven, fun, and enthusiastic team, focused on a sustainable future.
- A role with a lot of freedom to shape your function as you see fit, within a dynamic & rapidly evolving working environment.
- Opportunities for personal development and growth within an established name in the sector.
- A well-developed salary package with a laptop, meal vouchers, group insurance, and cafeteria plan.
